Choosing the right stair rail design is a great way to add safety and functionality to your homeowner's deck. Our Round Top TR100 and Flat Top TR600 are excellent ways to add a beautiful finished look to any deck railing project.

Here are 4 best practices when installing our railing system on stairs:

1. When you're transitioning from a deck rail to a stair rail, it's important to have a grab rail that meets code. Our Square Top TR600 is not only designed to meet grab rail code, but also to look similar to our popular Flat Top TR200 and Add-A-Top TR400.
2. If your stair rail runs longer than 5ft, you'll need intermediate post fittings (IPF) on all intermediate posts, creating a continuous hand rail which is required by code.
3. Our extended end plate kits are designed to make it easy for you to transition from a TR200 top rail to a TR600 grab rail on the stairs. Do this by attaching the extended end

plate to the terminating end of your TR200, then secure to the side of the top stair post using the included painted fasteners. Finally, attach the TR600 to the top stair post using a rail connecting block (RCB1).

4. When attaching RCB1s to posts, first attach them straight then use tin snips to cut off the exposed RCB1 tab for a clean, professional look.

If you have any questions, our sales representatives are here to help. From start to finish, they'll assist with takeoffs and make line drawings so your designs and materials are accurate.

Protection Meets Curb Appeal - Patio Cover Flat Pan

Our 6" x 2-1/2" Patio Cover Flat Pan can span up to 19' from house to gutter/beam at a 25 psf snow load. This provides a sleek, refined look, especially after adding a ceiling-mount accessory like a fan or lighting system using our fan beam. This combination gives the homeowner an optimal outdoor experience in all four seasons.
